EDUCATION

San Jose State University August 2025 - May 2029

B.S. Computer Science *San Jose, CA*

EXPERIENCE

Undergraduate Research Assistant September 2025 - Present

Reed Systems Group (San Jose State University) *San Jose, CA*

Disconnected Data Distribution (DDD) - A project that aims to bring messaging capabilities to disconnected areas such as by using transport devices such as bus drivers' phones to allow the sending and retrieval of data. (GitHub)

- Greatly involved in the **design and planning** of an early-stage DDD application which aims to eliminate the previously required rendezvous between client and transport devices allow client by using an Android phone as a drop box such as by putting together this modular **interactive build map** html to better the workflow.
- Presented DDD on stage to **100+ students, families, and university faculty**, communicating the project's concept in a way that abstracts the technicality for a mixed audience with non-technical members.
- Developed much of the notification pipeline from our server through to the Android apps which utilizes Picocli in the server terminal, **Spring Boot** (using **gRPC**) to bring the messages to specific transport devices, WiFi-Direct to deliver them to specific client devices, and the Kotlin Jetpack Compose Room library to store them.

PROJECTS

VroomView (GitHub)

- Developed a social media app for car enthusiasts to propose and discuss car ideas (configurations, concepts, etc.) hoping to 'democratize the automotive industry' by letting companies see popular consumer ideas and concepts.
- Implemented with a TypeScript front-end hosted in Vercel with a Supabase database managing auth and storage.

Web Crossword Generator (GitHub)

- Led the development of a TypeScript-based Web Crossword Generator website that allows teachers or other users to make topic-based crossword or word search puzzles and print them for use.
- Integrated LLM compatibility to allow users to generate the topic-based puzzles with an LLM of their choice.

InstaDM (macOS GitHub) (Windows GitHub)

- Developed a SwiftUI app with a restricted navigation allowlist to block users from much of Instagram's most addicting functionality while allowing participation in DMs then ported it onto Windows with WinUI 3.

Portfolio Website (https://rquader.github.io/PortfolioWebsite)

- Thoughtfully designed to convey my journey and document my projects, experiments, and experience with them.

COURSEWORK

Data Structures & Algorithms, Discrete Mathematics, Talking Back to Research: Critical Skills for Leaders
Currently Enrolled In: Introduction to Artificial Intelligence, Introduction to Computer Systems, Linear Algebra I

SKILLS

Java, Python, Git, Software Presentation & Communication, Claude Code, Codex, Cursor, Software Design, Software Development, Collaborative Work, Communication
